

Glawall

Glawall

— GENERAL INTRODUCTION —

Glawall partitions systems have been designed in order to offer individual and various design solutions in the interior partition space.

Their main application is found in public buildings administrative, industrial and others. They can be used also in residential buildings.

Diversity in the interior is visibly improved by using different systems partition walls. The space could be divided with glass partitions or with solid wood decor partitions.

In glass partitions the visibility could be controlled by using frosted or colored glass or with blinds integrated between the glass panels.

A key feature of the interior partitions is its sound insulating properties. Depending of the choice of materials it can reach from 33 dB to 52 dB.

The opening is accomplished through system built-in doors made of glass or solid panel, in color or wooden decor.

Integrated modules enable adding of electrical installations.

Quick and easy disassembly and assembly can be done on site if necessary.

Bright

System of office demountable partition wall with self-supporting curtain panels in glass and wood. Available in single-glass, double-glazed or two-wood versions. They are both framed and non-framed, but either way, you are getting massive amounts of daylight into your space.

Privacy

In glass partitions, the visibility could be controlled by using frosted or colored glass or with blinds integrated between the glass panels. Using these walls creates an agreeable and pleasurable environment to work in.

FRAMELESS GLASS PARTITION

| Single/Double Glass

| Panel THK: 108mm

108 Series Frameless Double Glass
| Panel THK: 108mm

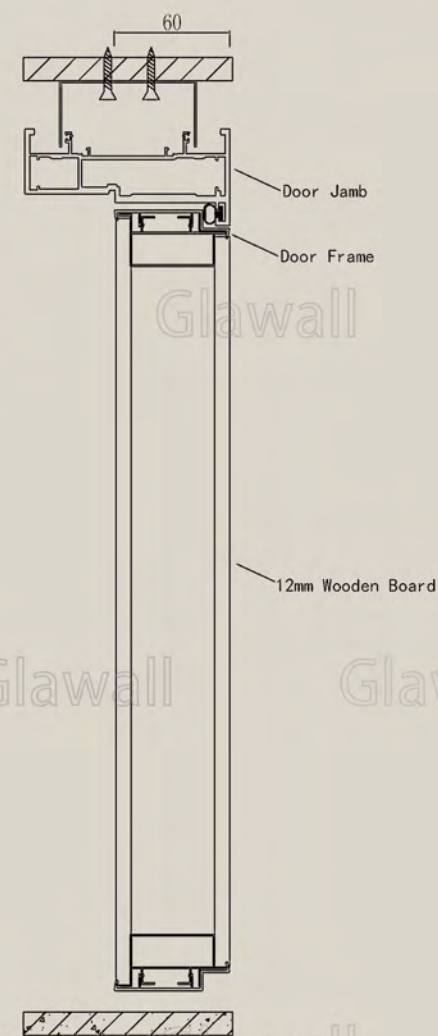

Access

The door is the second object in the interior that people are in the most frequent contact with after the furniture. At the same time, it is the door that provides privacy when closed ensuring that you cannot hear from one room to the other. Built-in doors made of glass or solid panel, integrated modules enable adding of electrical installations.
